

PD SENSORS

Parkinson's Disease Symptom Evaluation in a Naturalistic Setting producing Outcome measuRes using SPHERE (Sensor Platform of HEalthcare in a Residential Environment) technology

Do you want to help with Parkinson's disease research?

- We are looking to recruit people with **mild to moderate Parkinson's aged 18+ and their partner/ carer/family member/friend**
- To help us as we try to find out how to use technology to measure Parkinson's symptoms
- With an **aim of improving clinical trials so that important disease-slowing/reversing medications can be found**

The study will involve staying for 5 days in a house in the centre of Bristol and living your normal lives while your movements and activities are monitored (by static/wearable sensors), then feeding back to us about your experience. All expenses will be reimbursed.

Are you interested?
